

Anastasia Mourouzidou

Full Stack Developer

Gothenburg, Sweden · anast.moud@gmail.com · [GitHub](#) · [LinkedIn](#)

PROFILE

Full-stack developer fluent across Java/Spring Boot, JavaScript/TypeScript and Python (FastAPI), with hands-on experience designing REST APIs and working with SQL databases. Designed and shipped CARlimera Services, a booking and admin platform for a car dealership, end to end from data model through live production deployment, in daily use by real customers, with full ownership from build through post-launch fixes. Works AI-first in daily development, using tools like Claude to move faster while reviewing, testing and owning every line before it ships. No prior experience with distributed systems or cloud platforms at scale, but a demonstrated ability to take ownership of a backend system and learn quickly under real production conditions.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, Node.js, React, Typescript, Python (FastAPI), Java (Spring Boot)

Backend & APIs: RESTful API design, Layered Architecture, JWT Authentication, Role-Based Access Control, API-first development, Swagger/OpenAPI, Zod validation

Databases: MySQL, MongoDB, Firebase

Testing: Unit & Integration Testing with Jest, Test-Driven Development

DevOps & Deployment: Git, GitHub, Postman, Cloud-based deployment (Vercel, Render, Railway, GitHub Pages), environment-based configuration

Methods & Patterns: Agile workflows, clean architecture, OOP principles, scalable system design fundamentals

AI-assisted development: LLM-based coding tools in daily workflow, Gemini API integration, prompt design, code review of generated output

PROJECTS

[CARlimera Services](#) | FastAPI · MongoDB · React · TypeScript · Tailwind · Firebase Storage · Vercel · Resend

- Designed and delivered a full-stack platform for a live car dealership business
- Built a complete appointment booking system: slot availability, overlap detection, business-hours validation, customer self-cancellation via tokens and a multi-state admin accept/decline flow with transactional email.
- Structured the backend around a service layer with centralised exception handling and consistent schema naming between API and client.
- Owned deployment end to end, including resolving import structure failures on Vercel and configuring domain, DNS and email deliverability records.
- Agreed every feature directly with a non-technical business owner, translating operational needs into data models and interfaces.

[Library App](#) | Java · Spring Boot · MySQL · JWT · Swagger · JPA Auditing · Gradle · Railway

- Built a secure full-stack system with authentication and role-based access control
- Designed RESTful APIs using layered architecture with focus on scalability and maintainability
- Implemented production deployment and API documentation using Swagger/OpenAPI

[Developer Portfolio Backend API](#) | Node.js · Express · MongoDB · JWT · Zod · Swagger

- Built production-style REST API with authentication, validation, and structured architecture
- Implemented unit and integration testing across API endpoints
- Designed scalable backend structure with clear separation of concerns

[Dev Tools](#) | Gemini API · React · TypeScript · Node.js · Express

- Developed full-stack AI-powered productivity tool integrating external generative AI APIs
- Designed modular backend architecture for future feature expansion

- Focused on automation and developer workflow improvement

[Commute Risk Dashboard](#) | *React · Trafikverket API · MyMemory API · Leaflet*

- Built real-time data dashboard combining multiple external data sources
- Designed interactive UI to visualize and interpret real-world conditions
- Implemented data transformation and filtering logic for usability

[Developer Portfolio](#) | *React, TypeScript*

- Built a fully responsive personal portfolio using React and TypeScript with reusable component architecture
- Implemented smooth page transitions and UI animations using Framer Motion

WORK EXPERIENCE

Content Moderator (German Market) | *Teleperformance Hellas | 2024 – 2025*

- Worked in a high-volume environment requiring structured decision-making and attention to detail
- Collaborated in a distributed team, ensuring consistent quality under strict deadlines
- Developed strong responsibility for accuracy and reliability under pressure

Assistant | *AlphaCode Software Solutions | 2023*

- Built Flutter-based mobile UI prototypes including a multi-page BMI calculator app and a Firebase-authenticated login/registration flow for a car dealership, applying newly acquired skills to real product interfaces.
- Managed and updated product listings and content using WordPress, maintaining accuracy across a live business environment.
- Completed certifications in HTML & CSS (Codecademy) and Figma Essentials (Udemy) during the role, establishing a foundation in frontend tooling and UI design.

Secretary | *Notary Office "Arapakis Nikolaos" | 2021 – 2022*

- Managed legal documentation workflows across multiple active cases, using Excel to track deadlines and filing obligations with government bodies including tax authorities and courts.
- Coordinated daily communication with clients and public institutions to advance inheritance, property transfer and land registration cases, maintaining accuracy and confidentiality throughout.
- Handled administrative operations independently, including document preparation, compliance checks and use of the B-symbolaio legal management system.

Guest Relations Officer | *Marbella Corfu · Parga Beach Resort | 2021*

- Handled guest relations across both hotel environments — managing complaints, coordinating room assignments and ensuring smooth stays from check-in to departure.
- Onboarded onto Fidelio Suite8 hotel management software with no prior training, independently migrating paper-based reservation records into the live system while maintaining daily operations.

EDUCATION

Education

Coding Factory – Athens University of Economics and Business | *Full-Stack Software Development Program | 2025 - 2026*

- Developed full-stack applications using Node.js, React, Java, Spring Boot, Angular, SQL/NoSQL.
- Built RESTful APIs with JWT authentication and database integration.
- Applied software engineering principles: OOP, layered architecture, version control with Git; worked in Agile teams.

Ionian University – Bachelor of Arts in Translation, Department of Foreign Languages, Translation and Interpreting - Corfu, Greece | 2016 - 2022

LANGUAGES

Greek (Native) · English (Fluent) · German (Intermediate)
